Scan Summary : it.msu.ac.th
22 October 2023 06:09 AM

     Nmap - Network Mapper is a free and an open source application for network discovery, security auditing application. This application is available for windows and linux both platforms in GUI and CLI mode. Nmap can also be used for some useful networking tasks like network inventory, service discovery, host OS verification and sometimes for network based virus identification as well.

Operating System and Scan Mode

Operating System	OS No Detected
Scan mode	Default Scan

Common Ports

Port	Service	State
80	HTTP	open
443	HTTPS	open

The recommendations for controlling access and maintaining the security of the above-mentioned ports depend on your usage and system requirements, and you should use appropriate configurations to mitigate security risks to your system and network.
